NYAYA SETU (MVP)

Hackathon Build | India-first Citizen Legal Document Decoder

1) Project Overview

Problem

Common citizens in India frequently receive **legal notices and legal documents** that are:

- difficult to understand (complex language + legal jargon)
- stressful and confusing
- not accessible in their **mother tongue**
- hard to respond to correctly without professional help

MVP Goal

Build **NYAYA SETU**, a mobile-responsive web app that enables a user to:

- upload a legal document (**PDF / image scan**)
- preview + crop/rotate it
- choose their preferred output language each time
- receive a **simple structured breakdown**:
 - Summary
 - Key Points
 - Action: "Consult a lawyer."

Success Metric

Primary KPI:

- **User trust & satisfaction** via **1–5 rating + optional feedback**
-

2) Core Requirements

Platform

-  Mobile-responsive **Web App**

Authentication

-  Mandatory login
-  Phone OTP authentication
-  Session persistence ~**30 days**
-  Logout available from homepage header menu

Input Support

-  Upload **PDF**
-  Upload **JPG/PNG** images
-  Multi-image upload supported (treated as pages)
-  Maximum file size: **10MB**
-  Printed documents only (no handwritten support)

Document Support (MVP)

- Primary focus:  **Legal Notice**
- Also accepts any legal document type:
 - still decoded
 - auto-detect and label type

Language Support (MVP)

Total:  **8 languages**

- English
- Hindi
- Marathi
- Tamil
- Telugu
- Bengali
- Gujarati
- Punjabi

Rules:

- Ask language **every time** during decoding

- Show output in **one language at a time** (dropdown)

Storage & Retention

- ☒ Local-only storage (browser/device)
- ☒ Keep only **latest 3 documents**
 - uploading the 4th deletes oldest automatically
- ☒ Delete document supported
 - with confirmation modal
 - Undo toast for **5 seconds**
- ☒ Rename document supported

Performance Target

- Accuracy first
- Decoding can take **up to 60 seconds**

Safety & Trust

Top risk:

-  Wrong meaning/mistranslation causing panic

Mitigation:

- Results banner: **“This may be inaccurate.”**
- Show original extracted text (collapsible)
- Show document preview (first page)

UX Style

- Minimal, clean “Apple-like” interface
 - Dark mode included (manual toggle)
 - No onboarding screens
-

3) Core Features

A) Navigation + Theme (Refinement Features)

- ☒ Navbar with branding and navigation consistency
- ☒ Manual dark mode toggle (stored preference)
- ☒ Premium UI styling for cards, buttons, badges

B) Homepage

- ☒ Primary CTA: **Scan & Decode**
- ☒ Shows **recent 3 decoded documents**
- ☒ Premium cards for document list
- ☒ Empty state when no documents exist
- ☒ Dark mode toggle visible on homepage only

C) Upload + Preview

- ☒ Upload PDF/image(s)
- ☒ Preview screen with:
 - crop
 - rotate

D) Structured Decode Output

Results must have:

- ☒ Document type label (auto-detected)
- ☒ Category tag (broad buckets + fallback)
- ☒ Extracted key fields (Details section on top)

Tabs:

- ☒ Summary (5–7 lines)
- ☒ Key Points (6–10 bullets)
- ☒ Action Plan: only “Consult a lawyer.”

E) Export & Sharing

- ☒ Export/share as **single PDF report**
- Includes original preview + decoded results
- No watermark
- No disclaimer inside PDF (UI disclaimer only)

F) Error Handling (Refinement Features)

- ☒ Improved loading screen (spinner + “Decoding...”)
- ☒ Decode failure screen:
 - re-upload CTA
 - scan tips for better capture

G) Feedback Collection

-  Rating: 1–5
 -  Optional text feedback
-

4) Core Components

Pages/Screens

1. **Login (OTP)**
2. **Homepage**
3. **Upload**
4. **Preview (Crop/Rotate)**
5. **Language Selection**
6. **Confirm Upload**
7. **Loading**
8. **Results**

Key UI Components

- Navbar (branding + logout + theme toggle)
 - Theme Toggle (dark/light)
 - Primary CTA button (“Scan & Decode”)
 - Recent docs card list (max 3)
 - File upload selector (PDF / images)
 - Preview editor (crop + rotate)
 - Language dropdown (8 options)
 - Loading spinner component
 - Results:
 - warning banner (“This may be inaccurate.”)
 - details card for extracted fields
 - badges (type, category, urgency)
 - tabs for output
 - document preview modal
 - collapsible original extracted text section
 - Rename modal
 - Delete confirmation modal
 - Undo toast (5 seconds)
 - Export PDF button
 - Rating widget
-

5) App / User Flow

Forward-Only User Journey

1. **Login**
 - phone → OTP → verify
 - redirect to homepage
2. **Homepage**
 - CTA: Scan & Decode
 - shows latest 3 docs
 - dark mode toggle available here
 - logout available
3. **Upload**
 - choose PDF or images
 - validate size/type
4. **Preview**
 - crop/rotate
 - continue
5. **Language selection**
 - user picks 1 of 8 languages (every time)
6. **Confirm**
 - “Proceed to Decode”
 - warning: only latest 3 documents kept
7. **Loading**
 - spinner + “Decoding...”
8. **Results**
 - type + category + urgency
 - extracted details fields
 - tabs (Summary / Key Points / Action Plan)
 - document preview (first page modal)
 - collapsible extracted text
 - actions: rename / delete / export PDF
 - rating + feedback

Notes:

- No back-navigation across steps
- No Done button
- Results stay open until user exits manually

6) Techstack

Frontend

- React (Vite/Next acceptable)
- TypeScript
- TailwindCSS
- Component structure:
 - components/
 - pages/
 - lib/

Backend

- Node.js (Express / API routes)

Auth (OTP)

- Firebase Phone Auth (recommended for speed)

OCR

- OCR provider (choose one for MVP):
 - Google Vision OCR (best accuracy)
 - Tesseract (server-side alternative)

LLM Simplification + Vernacular Output

- LLM provider (example):
 - OpenAI API
- Strict structured output schema enforced

Local Storage

- IndexedDB for storing docs locally
- Dexie.js recommended wrapper

Export PDF

- pdf-lib or React-PDF

Deployment

- Replit publish OR Vercel (if Next.js)
-

7) Implementation Plan

Phase 1 — UI Foundation + Refinement Layer

1. Setup theme system + Tailwind base
2. Add Navbar + dark mode toggle
3. Make homepage premium:
 - CTA
 - recent docs cards
 - empty state

Phase 2 — Core Decode Flow

4. Upload screen (PDF/images, validation)
5. Preview screen with crop/rotate
6. Language selection screen
7. Confirm screen + “keep only last 3” warning

Phase 3 — Decode Pipeline + Persistence

8. OCR extraction pipeline (always OCR)
9. LLM decode pipeline (strict schema)
10. Loading screen triggers API call
11. Save decoded doc into IndexedDB
12. Enforce keep-only-last-3 retention

Phase 4 — Results Experience (Premium Layout)

13. Results layout:
 - banner warning
 - details card
 - type/category/urgency badges
14. Tabs: Summary / Key Points / Action Plan
15. Document preview modal (first page)
16. Collapsible original extracted text

Phase 5 — Actions & Export

17. Rename doc
18. Delete with confirm modal + Undo toast
19. Export single PDF report

Phase 6 — Quality + Success Metric

- 20. Improved error/failure screen with scan tips
- 21. Add rating + optional feedback
- 22. QA pass for demo-readiness
- 23. Deploy and smoke test
